Jorge León Salas

Software Engineer

Games and XR development

PROFILE

Game developer with a passion for XR and technology. Skilled in Unity, I thrive in team environments, delivering high-quality features quickly while fostering collaboration. My curiosity and passion for innovation have allowed me to work more efficiently, constantly finding ways to improve development, including leveraging AI to accelerate processes.

SKILLS

 Unity, Unreal Engine with Blueprints, C#, Java, Python, HTML, CSS, JS, Node.js, React

 VR development, rapid iteration, CPU optimization, debugging, and troubleshooting

 Teamwork, mentorship, leadership, assertiveness and adaptability

 AI leveraging and integration, prompt engineering, AI-generated content pipelines

EDUCATION

VR/AR Design and Development

Vancouver Film School - Aug 2022

Computer Science Engineering

Instituto Tecnológico y de Estudios Superiores de Monterrey - Dec 2020

Videogame design & programming

Vancouver Film School - Jul 2019

PROFESSIONAL EXPERIENCE

Game Developer

Greensky Games / Montreal, Canada / August 2023 – April 2025

Contributed to the development of three VR games published on different platforms, rapidly implementing features while maintaining high quality. Participated in playtests for various games and prototypes, providing clear feedback on mechanics, design, and art. Identified and reported bugs effectively to the development and art teams. Additionally, collaborated across disciplines, assisting team members with technical challenges. Key contributions include:

Shadow Chambers / Greensky Games / Unity Lead Developer / 2025

- Solely designed, developed, and maintained all core gameplay systems during the demo phase, including game flow, game puzzles, NPC dialogue, scene management, audio, UI and localization.
- Built a fully optimized VR demo from the ground up, ensuring compliance with Meta Quest Store requirements and delivering a polished, high-performance experience.
- Led Unity development and defined technical constraints, optimizing workflows as the team expanded while collaborating with developers and artists to maintain efficiency and quality.
- Developed the initial AI-driven content generation pipeline, integrating generative AI APIs (ChatGPT, Claude, ElevenLabs, Flux) to dynamically create game narratives, character dialogues, and puzzles.

Chronostrike / Greensky Games / Unity Intermediate Developer / 2024

- Led audio programming by developing a centralized audio manager to route Wwise events, ensuring a streamlined audio pipeline for the game's timeline-based development and multiplayer functionality. This system manages sound effects and voice-over priority, as well as a queueing system.
- Designed and implemented complex behaviors with multiplayer considerations, including Vivox voice integration and VFX that dynamically reacted to player voices.

Swarm 2 / Greensky Games / Unity Intermediate Developer / 2023

- Utilized Meta Quest and Pico SDKs to optimize game features for different hardware.
- Developed designer-friendly tools and advanced features, integrating complex behaviors and mathematical techniques. This included procedural enemy movement and instantiation, state machine implementation and refinement for enemy AI, and inverse kinematics applications.

QA Automation Engineer

Solera, Inc / Mexico City / December 2020 – December 2021

Collaborated on the architecture, implementation, and training of a Selenium-based C# framework, reducing test runtime from 3 hours to 30 minutes. Enabled scheduled runs, automated reporting to TestRail, and eliminated manual execution within the project.

Digital Innovation & Technology – IT Applications Intern

Schneider Electric / Mexico City / September 2019 – June 2020
